

Competitive Analysis — Indian Wealth Tracking & Advisory Market

Prepared using discover-competitive-analysis approach. Sources: each company's own website, App Store/Play Store listings, and (for Mprofit) the prior deep-dive case study already in project context. All info is public.

1. Competitor Snapshot Table

Company	Core Model	Regulatory Status	Asset Coverage	Data Import Method	Pricing
Mprofit	Portfolio tracking/accounting SaaS	None disclosed (not an RIA/MFD itself — MF Central access via Mvest, an AMFI MFD partner)	Stocks, F&O, MF, Bonds, FD, NPS, PMS, AIF, ULIP, PPF, Property, Gold	PDF/Excel parsing (700+ institutions) + MF Central CAS API (via partner)	Free → Lite (\$33) → Plus (\$83) → HNI (~\$250)/yr
Famli	Family net-worth app + AI insights	SEBI RIA (INA000021979)	MF, bank accounts, insurance, loans, cards	Account Aggregator + manual entry/document upload	Free (early access); premium TBD
Passbook.ai	"Super app" wealth aggregator	AMFI-registered MFD (ARN-323410)	Banking, FD, RD, cards, loans, insurance, stocks, MF, property, gold, bonds, F&O, crypto,	Explicitly built on RBI-licensed Account Aggregators ("Safe data from RBI-licensed AAs")	Free tier (waitlist/early access model)

Company	Core Model	Regulatory Status	Asset Coverage	Data Import Method	Pricing
			pension, govt savings, chits		
Kuvera (now Kuvera by CRED)	Direct MF investing + tracking, owned by CRED since 2024	SEBI RIA (Arevuk Advisory Services, INA200005166)	MF (direct plans), stocks (Nifty/Sensex + US stocks), gold, FDs, EPF	CAS upload + broker import (Zerodha, Upstox, etc.)	Free (monetizes via Surplus/liquid-fund float, partner promotions)
NGEN Markets	Institutional-grade research/analYTics tool for advisors , not retail investors	N/A (B2B research tool)	MF + equity research/backtesting, no personal portfolio tracking as core	Advisors upload/build portfolios manually for analysis	Subscription (advisor-facing, contact for demo)
Safebox	Family document vault + net-worth tracker	SEBI Regulated Entity (RIA)	MF, stocks, FD, bank, gold, property, EPF, NPS, vehicles, insurance, IDs, documents	Manual entry + document upload (EPF auto-fetch via SMS); no evidence of CAS/AA import yet	Free tier + premium (family sharing, vault storage, analytics)
PowerUp Money	MF advisory app (not a tracker-first product)	SEBI RIA (Uniorbit Wealth Management, INA000019798)	Mutual funds only (equity + hybrid)	User's existing MF portfolio pulled in for rating/review (mechanism not disclosed)	Free review tier; PowerUp Elite ₹999/yr

2. Positioning Map

Two axes that best separate this set: **(x) Breadth of asset/data coverage** (MF-only → full multi-asset net worth) and **(y) Depth of engagement model** (passive tracking → active advice/action).

| AA-native, super-app)

|

| Safebox

| (documents + net worth,

| passive, family-focused)

Low advice/action

Reading it: Mprofit and Passbook.ai both sit in "broad coverage," but Mprofit is accounting-depth-first (capital gains, XIRR, double-entry books) while Passbook.ai is breadth-first (chits, crypto, pension — everything, but likely shallower on any one asset class). Safebox is the "document vault + net worth" niche — closer to an estate/family-safety product than a portfolio analytics one. PowerUp and Kuvera are both MF-native but PowerUp is pure advisory (buy/hold/sell signals) while Kuvera is transactional (you invest through them). NGEN isn't really a peer — it's a B2B research tool for advisors, useful as a **feature reference** (this is likely what Ayush meant by "NGEN research website" for the analytics dashboard), not a product competitor.

3. Where We Can Win — Whitespace Analysis

1. **Nobody combines Mprofit's accounting depth with Passbook.ai's Account-Aggregator-native breadth.** Mprofit is deep but import-fragile (PDF templates); Passbook is broad but (based on public info) shallower on tax/capital-gains rigor. A platform that's AA-first for breadth *and* does FIFO/XIRR/grandfathering-grade tax computation is not currently occupied.
2. **Family-structure is contested but shallow everywhere.** Famli, Safebox, and Kuvera all claim "family" as a feature, but none combine it with deep multi-asset accounting. Our "one login → one family → 5 members" plan needs to go deeper than a shared view — actual per-member capital gains, corporate actions, and consolidated + individual reporting.
3. **Advisory is a regulatory fork, not a feature toggle.** Famli, Kuvera, and PowerUp are all SEBI RIA-registered specifically because giving personalized recommendations legally requires it. Our plan to add "prescriptive analytics" (rebalancing nudges, tax-loss harvesting flags) needs an explicit decision: pursue RIA registration deliberately (like PowerUp did, cleanly separate from the AMFI MFD track already in motion for MF

Central), or keep everything informational/descriptive to stay unregistered. This is a real strategic fork worth a dedicated decision doc, not an assumption.

4. **Document vault + emergency access (Safebox's core) is a genuinely different job-to-be-done** from portfolio tracking — worth knowing about for the "FD/emergency fund" and legacy-planning features already on our roadmap, but not something to chase as a primary differentiator; it's a complement.
5. **Import UX quality is still the single biggest lever.** Every player in this table has some form of CAS/AA import; none have publicly emphasized a *review-before-commit*, *confidence-scored* import experience the way our CAS-parser prototype already does. That's a real, already-built advantage — worth highlighting in positioning.

4. Regulatory Landscape Note (relevant to our roadmap)

Every RIA/MFD-registered competitor above (Famli, Passbook.ai, Kuvera, PowerUp) confirms the pattern already identified: **serious players in this space are regulated entities**, not just software vendors. Passbook.ai in particular has already built on **Account Aggregator** as its stated core data-access method — this is public confirmation that AA is a live, working path other startups are shipping on today, not just a theoretical 5–10 month future option. Worth revisiting the AA timeline urgency once the ARN partnership is confirmed live.
