

Reading Guide & Competitor Scorecard

How the Drive Folder Is Organized

You'll find these folders shared with you. Go through them in this order:

01_Project_Overview/ ← you already read this

02_Reference_Documents/ ← background material, read second

 |— Competitor_Analyses/ (11 competitor deep-dives + combined feature matrix)

 |— Mprofit_Case_Study/

 |— MF_CAS_Parser_Reference/ (technical background on CAS parsing)

 |— MFCentral_API_Reference/ (historical — why this path is largely closed now)

 |— Brand_Identity/

03_PRDs/ ← read third, in this exact order

 |— PRD-01-CAS-Parser-v2.md

 |— PRD-02-Signup-Onboarding.md

 |— PRD-03-Main-Dashboard.md

 |— PRD-04-MF-Analytics-Dashboard.md

04_Design/

 |— Design-Brief-Unifolio.md

05_Your_Tasks/

 |— (the work plan and deliverables doc — your day-by-day guide)

Read everything in [02_Reference_Documents](#) and [03_PRDs](#) before writing any code.
Skipping ahead to build without this context is the single easiest way to build the wrong thing.

Competitor Analysis — Don't Just Read, Fill This In

Reading 11 competitor documents back-to-back is a good way to retain none of it. Instead, as you go through each one, fill in a row of the table below. This forces you to extract the one or two things that actually matter from each document instead of skimming.

Do this for all 11 competitors before moving to the PRDs. This is Deliverable #1 — see the work plan doc for when it's due.

Competitor	One-line what they are	How they get MF data in	Free or paid tracking?	One thing worth stealing	One thing to avoid
Mprofit					
Famli					
Passbook.ai					
Kuvera					
Safebox					
PowerUp Money					
Passbook Family					
Ionic Wealth					
Stack Wealth					
Novelty Wealth					
NGEN Markets					

Some tips on filling this in well:

- "One thing worth stealing" should be specific and actionable — not "good UI," but something like "shows fee impact directly on the holdings screen."

- "One thing to avoid" is just as valuable — several competitors have known missteps (e.g., one redesign caused a user backlash by force-merging data sources without a way to opt out) that are worth knowing about *before* you're the one building a similar feature.
- The combined feature-parity matrix document in the Reference Documents folder is a useful cross-check once you've filled in your own table — see if your read matches it.

Your Own Independent Research Task

Once your table is filled in, pick **one** of these and spend no more than half a day on it, written up as a short (half-page) note:

- Sign up for one competitor's free tier yourself (pick one you haven't used) and note what the actual first-5-minutes experience is like, not just what their marketing says.
- Check if there's any competitor or new entrant in this space from the last few months that isn't in our existing research.
- Pick one specific feature mentioned across multiple competitor docs (e.g., fund overlap detection) and go a level deeper on how 2-3 of them actually implement it.

Write up whichever you pick as its own short document — this is Deliverable #2.

Reading the PRDs

Each PRD follows the same structure: Problem Statement → Goals → Scope (what's in, what's explicitly out) → detailed Functional Requirements → Open Questions. Read the **Scope** section of each one carefully — a lot of what makes these documents useful is what they deliberately exclude, not just what they include, so a feature doesn't get built twice in two different modules by accident.

Pay particular attention to any section literally called "Open Questions" or "Dependencies & Risks" — these tell you where a decision hasn't been finalized, which matters if you're about to write code against that part of the spec.
